

Mixing Oil & Water?

Economic development and climate
change
In New England

Cameron Wake PhD.

Tuesday January 31st at 7:00pm
at Rye Public Library

Climate Changes. It always has and always will.

A wide variety of climate indicators show that the northeastern United States has been warming over the past four decades and that this warming has already begun to impact a variety of ecosystems and economic sectors

The decisions we make over the next decade regarding how we produce and use energy will determine the future climate of New England.

Improving our energy efficiency and developing local sources of energy can serve to reduce our greenhouse gas emissions, improve our economy and our energy security, and reduce our vulnerability to price spikes for oil and gas in the future

Join us as Dr. Cameron Wake, Associate Professor, Institute for the Study of Earth, Ocean and Space, University of New Hampshire discusses recent research regarding climate change and its impact on the New England eco-system and economy

This entertaining and informational program is free of charge and open to the public
